Scott Gale

Innovative tech mind starting out in the programming world. Eager to learn new skills, coming from a background in finance and technical analysis, advising hedge funds and long only funds. Highly organised and able to solve problems to deliver objectives using logical reasoning and attention to detail.

Using the experience from my analyst role, I have developed key communication and organisational skills to deliver a concise strategy aimed at dealing with problems ahead. As a result of redundancy, I took the opportunity to change career path into web development and enrolled at Flatiron Bootcamp. I am motivated to continue to learn new skills and work well within a team.
